2. Served over 1000 companies from different industries, helping customers to achieve more than 50 billion financial returns
3. Selected by CAQ to participate writing GB/T 36077-2018, national standard of Six Sigma Management

# Sole Agent of DFMA® Methodology & Software in China

The Automotive Quality Management System Standard (IATF 16949) was created and published by the International Automotive Task Force (IATF). The TS16949:2009 standard is an automotive management system standard based on ISO9001:2008. With the release of the ISO9001:2015 version, ISO/TS1949 officially became IATF16949. The goal is to develop a quality management system in the supply chain that provides continuous improvement, emphasizes defect prevention, and reduces variability and waste.

IATF16949 focuses on customer orientation, integrates many previous customer-specific requirements, commits to continuous improvement, and emphasizes the prevention of defects. Among them, the design and development of products and services section of IATF16949 mentions that the product design output should include, but not be limited to, product design error prevention results, such as: DFMA®.

As the sole agent of DFMA® methodology and software of BDI Company in China, QualiSys aims to introduce foreign advanced products and technologies to customers, helping them meet international standards in quality management and improve the competitiveness in international manufacturing market.
